

REPRAPWORLD

3D print shows

Last month RepRapWorld attended two shows: 3DprintEU in Emmen and the TCT in Birmingham.

3DprintEU

On the 22th of September, RepRapWorld presented at the 3DPRINTEU expo in Emmen, Netherlands. The focus of the expo was to look at durable solutions for a sustainable future with 3D printing. Which of course fit perfectly with our filaments and 3D printer solutions. We had three Beagle printers tirelessly working throughout the day, which drew quite a few people to our stand.

As we like to do things differently, we had a stand focusing on the important stuff: our products and solutions instead of marketing. We had a good resonance with many of the people who dropped by our stand, and interesting conversations with new and existing customers whom consider themselves DIY "purists". Thanks to everyone who joined us and hopefully this event grows even bigger next year.

TCT Show 2016

One of the biggest annual 3D expos is in Birmingham, UK. The TCT Show is held at the National Event Center and has more than 200 exhibitors demonstrating 3D printer related products and services from around the world. Some of the largest RepRap & corporate names from across the world are in attendance, resulting in an exciting atmosphere and buzz as everyone checks out the cutting edge of this technology. For the second year in a row,

RepRapWorld had a booth, this time even larger and with four people (instead of 2 last year). And that was still barely enough, as the Reprap part of the event did a very good job at attracting people. There were several times our stand was completely filled with curious attendees and businesspeople. We had a few cool new things to show off in our filaments section, of which you will hear more about very soon! The SLA-DLP printer and Beagles also did a good job attracting and entertaining people. Our friends from E3D had their stand right across from us, so we had a great time comparing our latest developments and catching up with them.

Lastly, a couple other highlights and honorable mentions: 1) a DIY Reprap printer made from two Ikea tables (<http://printtable.com/>) and 2) flexible resins which we will definitely try with our SLA-DLP printer.

Overall, it was great fun. Thanks everyone who visited us and hopefully we will see each other again next year!

FREE tickets to Euromold, Munich

From the 25th till the 27th of October you can find us at the Euromold show in Munich Germany. Our booth number is D152 and we are placed in Hall A1. It is going to be a great event, so please come and visit. Courtesy of Euromold themselves, we have a bunch of voucher codes for free access to the event. Click [here](#) for a free ticket code. You will need to login to our website to order the voucher codes.

Thingiverse updates

On Thingiverse you can find a lot of cool stuff to print. From guitar picks to Pokemon. You can also find handy stuff to cover up electronics. These new items on Thingiverse are created for items that we sell on our shop.

Graphical LCD screen V1.0

- 1) Vito Brabetz made [this](#) beautiful case for our Graphical LCD Screen;
- 2) Our own Stefan Witte also made [this](#) awesome design case for the Graphical LCD screen.

Ultratronics

Damien Galanaud wanted to make something for our Ultratronic. And he did a fine job doing so! Check out his design [here](#).

**Did you print something for one of our products?
Let us know and we will put it in our next
newsletter**

Beagle firmware updates!

We are almost ready with the latest firmware upgrade for our in house Beagle 3D printer. This milestone will enable the graphical LCD board to be used with the Beagle for stand alone autonomous printing, or for easier portability (e.g. to show your printer off to your friends). In the meantime we are also converging on a delta auto-probe solution which will make calibration a breeze. Check out the website regularly for updates on the software at: <https://reprapworld.com/software/>

New Product: Casing for the Graphical LCD

As mentioned earlier, Stefan Witte made a case for our Graphical LCD screen. Its a compact, functional and nice looking design. You can print it on Thingiverse or you can buy it in our shop by clicking [here](#)!
